

Most of my time goes into building; the rest into leading a team of four. That work spans everything from AI agents and marketplace features through to infrastructure and event-driven systems. I enjoy every part of working in tech, and I'm motivated by learning new things and shipping products that people actually use.

WORK EXPERIENCE

Senior Engineering Manager - Lottie, London

Nov 2024 - Present

Promoted from Senior Software Engineer to Engineering Manager to Senior Engineering Manager.

Claude Code | TypeScript | React | Postgres | AWS | Inngest | LiveKit | ElevenLabs | Twilio | AI SDK | BigQuery | PostHog

- Built the AI chat (web and WhatsApp) and voice agents that route care seekers to partners - over 150 live-chat sessions and 700+ AI-handled calls a day, with evals gating every prompt and model change.
- Led engineering for the entire care-home marketplace, serving 5k users a day, working with product, data and design to build impactful features for customers and partners.
- Built a call-tracking service that proxies enquiries from the marketplace to measure their quality - over 500 proxied calls a day, transcribed in both directions between care seeker and partner and classified by an LLM.
- Shipped core features including messaging, call functionality, account management, and the ranking algorithms behind search.
- Built B2B tooling so partners can manage their portfolios - marketing controls, prioritisation, and SMS/WhatsApp/email notifications.
- Managed a team of four from junior to staff level (~20% of my time; the rest hands-on), and hired across engineering and data.
- Introduced fundamentally new ways of building our products, such as event-driven systems (Inngest).
- Onboarded the whole company, from sales to marketing, onto Claude Code, and built the skills and tools that boost productivity around it - data-warehouse Slack bots, an internal Claude Code manager.

Founding Engineer - Paradime, London

Jan 2022 - Nov 2024

Python | Go | Kubernetes | Terraform | Postgres | GraphQL | dbt | AWS | Helm | Grafana | React

- One of the first engineers on a data-engineering platform - online IDE, pipeline jobs, catalogue and lineage - owning system design across 10 distributed services, 3 languages, 6 regions and ~100 tenants.
- Created Bolt, the flagship feature for scheduled production pipelines: 10M+ runs, 95%+ coverage, 99.99% uptime.
- Built the online Editor - Kubernetes control plane spinning up isolated, multi-tenant IDEs in seconds on network-mounted FSx.
- Worked across Auth0 user/company management, alerting and notifications, in-house integrations with data warehouses such as Snowflake and BigQuery, public APIs, a CI/CD GitHub App, and AI features including a dbt agent that writes code directly in the editor.
- Owned all the infrastructure: Terraform IaC across environments, CI/CD (GitHub Actions, Helm), observability with Prometheus/Grafana/New Relic - metrics, tracing and alerts, Tailscale VPN, SOC 2 and fin-ops. Our migration of services to ARM (Graviton) - lower cost and carbon - was featured in an AWS article.
- Mentored and interviewed across the team, ran on-call, and published our public and private Python/Go libraries.

Senior Software Engineer - LYST, London

Nov 2020 - Jan 2022

Python | Django | MySQL | AWS | Elasticsearch

- Built the expert product-tagging service end to end - hand-curated, high-value tagging on ~2,000 of the 40,000 new products added a day.
- Delivered dynamic home-page content across a microservice architecture, growing interactions to ~200/minute, and helped PMs shape new content ideas around the services we had available.
- Enforced strong engineering practice - MyPy and full test coverage - and presented company-wide.

Python Engineer - Octopus, London

Aug 2018 - Nov 2020

Python | Flask | MySQL | GCP

- Digitalised Octopus Property, a system managing over £2.5bn in assets, from infrastructure through to front end.
- Worked on client-facing products Octopus Cash and Octopus Choice, improving trading-platform efficiency.

PROJECTS

We Converse (weconverse.app) - record real conversations with prompts to get you talking, transcribed and private until you share. Swift, TypeScript and Cloudflare.

notifi (notifi.it) - notifications to your devices from simple HTTP requests. Flutter and Go.

Transfer Me It (transferme.it) - secure, private file transfer between Macs. Objective-C and Go.

Crypter (crypter.co.uk) - encrypted Facebook chat extension, featured in TechCrunch, The Next Web and Digital Trends.

Tragic Clothing (2012-2014) - a T-shirt business built during A-Levels, and where the programming started. PHP and jQuery.

EDUCATION

BSc (Hons) Computer Science & Artificial Intelligence - University of Sussex, 1st Class
